

NEPA process. (For the first conformity determination on the transportation plan after November 24, 1993, a project may not be included in the “Baseline” scenario if one of the following major steps has not occurred within the past three years: NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications and estimates. Such a project must be included in the “Action” scenario, as described in paragraph (d) of this section.)

(d) Define the ‘Action’ scenario for each of the analysis years as the transportation system that will result in that year from the implementation of the proposed transportation plan, TIPs adopted under it, and other expected regionally significant projects in the nonattainment area. It will include the following (except that projects listed in §§93.134 and 93.135 need not be explicitly considered):

(1) All facilities, services, and activities in the ‘Baseline’ scenario;

(2) Completion of all TCMs and regionally significant projects (including facilities, services, and activities) specifically identified in the proposed transportation plan which will be operational or in effect in the analysis year, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is identified in the applicable implementation plan;

(3) All travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any Federal funding or approval, which have been fully adopted and/or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination on the transportation plan;

(4) The incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any Federal funding or approval, which were adopted and/or funded prior to the date of the last conformity determination

on the transportation plan, but which have been modified since then to be more stringent or effective;

(5) Completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP; and

(6) Completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.

(e) Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the ‘Baseline’ and ‘Action’ scenarios and determine the difference in regional VOC and NO<sub>x</sub> emissions (unless the Administrator determines that additional reductions in NO<sub>x</sub> would not contribute to attainment) between the two scenarios for ozone nonattainment areas and the difference in CO emissions between the two scenarios for CO nonattainment areas. The analysis must be performed for each of the analysis years according to the requirements of §93.130. Emissions in milestone years which are between the analysis years may be determined by interpolation.

(f) This criterion is met if the regional VOC and NO<sub>x</sub> emissions (for ozone nonattainment areas) and CO emissions (for CO nonattainment areas) predicted in the ‘Action’ scenario are less than the emissions predicted from the ‘Baseline’ scenario in each analysis year, and if this can reasonably be expected to be true in the periods between the first milestone year and the analysis years. The regional analysis must show that the ‘Action’ scenario contributes to a reduction in emissions from the 1990 emissions by any nonzero amount.

**§93.123 Criteria and procedures: Interim period reductions in ozone and CO areas (TIP).**

(a) A TIP must contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only, except as otherwise provided in §93.136. It applies to the net

effect on emissions of all projects contained in a new or revised TIP. This criterion may be satisfied if a regional emissions analysis is performed as described in paragraphs (b) through (f) of this section.

(b) Determine the analysis years for which emissions are to be estimated. The first analysis year shall be no later than the first milestone year (1995 in CO nonattainment areas and 1996 in ozone nonattainment areas). The analysis years shall be no more than ten years apart. The second analysis year shall be either the attainment year for the area, or if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.

(c) Define the 'Baseline' scenario as the future transportation system that would result from current programs, composed of the following (except that projects listed in §§93.134 and 93.135 need not be explicitly considered):

(1) All in-place regionally significant highway and transit facilities, services and activities;

(2) All ongoing travel demand management or transportation system management activities; and

(3) Completion of all regionally significant projects, regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition (except for hardship acquisition and protective buying); come from the first three years of the previously conforming TIP; or have completed the NEPA process. (For the first conformity determination on the TIP after November 24, 1993, a project may not be included in the "Baseline" scenario if one of the following major steps has not occurred within the past three years: NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications and estimates. Such a project must be included in the "Action" scenario, as described in paragraph (d) of this section.)

(d) Define the 'Action' scenario as the future transportation system that will result from the implementation of

the proposed TIP and other expected regionally significant projects in the nonattainment area in the timeframe of the transportation plan. It will include the following (except that projects listed in §§93.134 and 93.135 need not be explicitly considered):

(1) All facilities, services, and activities in the 'Baseline' scenario;

(2) Completion of all TCMs and regionally significant projects (including facilities, services, and activities) included in the proposed TIP, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is contained in the applicable implementation plan;

(3) All travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any Federal funding or approval, which have been fully adopted and/or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination on the TIP;

(4) The incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any Federal funding or approval, which were adopted and/or funded prior to the date of the last conformity determination on the TIP, but which have been modified since then to be more stringent or effective;

(5) Completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP; and

(6) Completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.

(e) Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the 'Baseline' and 'Action' scenarios, and determine the difference in regional VOC and NO<sub>x</sub> emissions (unless the Administrator determines that

additional reductions of NO<sub>x</sub> would not contribute to attainment) between the two scenarios for ozone nonattainment areas and the difference in CO emissions between the two scenarios for CO nonattainment areas. The analysis must be performed for each of the analysis years according to the requirements of § 93.130. Emissions in milestone years which are between analysis years may be determined by interpolation.

(f) This criterion is met if the regional VOC and NO<sub>x</sub> emissions in ozone nonattainment areas and CO emissions in CO nonattainment areas predicted in the 'Action' scenario are less than the emissions predicted from the 'Baseline' scenario in each analysis year, and if this can reasonably be expected to be true in the period between the analysis years. The regional analysis must show that the 'Action' scenario contributes to a reduction in emissions from the 1990 emissions by any nonzero amount.

**§ 93.124 Criteria and procedures: Interim period reductions for ozone and CO areas (project not from a plan and TIP).**

A transportation project which is not from a conforming transportation plan and TIP must contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only, except as otherwise provided in § 93.136. This criterion is satisfied if a regional emissions analysis is performed which meets the requirements of § 93.122 and which includes the transportation plan and project in the 'Action' scenario. If the project which is not from a conforming transportation plan and TIP is a modification of a project currently in the plan or TIP, the 'Baseline' scenario must include the project with its original design concept and scope, and the 'Action' scenario must include the project with its new design concept and scope.

**§ 93.125 Criteria and procedures: Interim period reductions for PM<sub>10</sub> and NO<sub>2</sub> areas (transportation plan).**

(a) A transportation plan must contribute to emission reductions or must not increase emissions in PM<sub>10</sub> and NO<sub>2</sub> nonattainment areas. This criterion

applies only during the interim and transitional periods. It applies to the net effect on emissions of all projects contained in a new or revised transportation plan. This criterion may be satisfied if the requirements of either paragraph (b) or (c) of this section are met.

(b) Demonstrate that implementation of the plan and all other regionally significant projects expected in the nonattainment area will contribute to reductions in emissions of PM<sub>10</sub> in a PM<sub>10</sub> nonattainment area (and of each transportation-related precursor of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the director of the State air agency has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified the MPO and DOT) and of NO<sub>x</sub> in an NO<sub>2</sub> nonattainment area, by performing a regional emissions analysis as follows:

(1) Determine the analysis years for which emissions are to be estimated. Analysis years shall be no more than ten years apart. The first analysis year shall be no later than 1996 (for NO<sub>2</sub> areas) or four years and six months following the date of designation (for PM<sub>10</sub> areas). The second analysis year shall be either the attainment year for the area, or if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.

(2) Define for each of the analysis years the "Baseline" scenario, as defined in § 93.122(c), and the "Action" scenario, as defined in § 93.122(d).

(3) Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the "Baseline" and "Action" scenarios and determine the difference between the two scenarios in regional PM<sub>10</sub> emissions in a PM<sub>10</sub> nonattainment area (and transportation-related precursors of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the director of the State air agency has made a finding that such precursor emissions from
